DEPARTMENT OF  
ELECTRICAL AND ELECTRONICS ENGINEERING

EE493 ENGINEERING DESIGN I

---

## Car Chasing Robot Conceptual Design Report

---

**Supervisor:** Assoc. Prof. Emre Özkan  
METU EE / C-112

**Project Start:** 4/10/2018  
**Project End:** 26/5/2019  
**Project Budget:** \$450

**Company Name :** Duayenler Ltd. Şti.

# 1 VER1

## 1.1 Systems & Subsystems Requirements

### 1.1.1 Sensing System Requirements

- The system should detect the sides of the road.
- The system should not be effected from external disturbances.
- The system should detect the opponent vehicle.

#### 1.1.1.1 Lane Detection Subsystem Requirements

- The subsystem should be able to detect only the shades of green color
- The subsystem should be able to detect edges in the camera frame in any light condition
- The subsystem should be able to tell differences between disturbances and lane
- The subsystem should be able to interpret the middle of the lane if both sides are present at the frame

#### 1.1.1.2 Vehicle Detection Subsystem Requirements

- The subsystem should detect the opponent to be caught with in a 5 cm
- The subsystem should detect the chasing opponent if it reaches from back with in a 5 cm

### 1.1.2 Computation System Requirements

- The system should be able to produce middle line to follow
- The system should be able to control the robot

#### 1.1.2.1 Data Processing Subsystem Requirements

- The subsystem should be able to analyse data produced by sensing system
- The subsystem should be able to produce the angle information required by the controller subsystem
- The subsystem should be able to work on Raspberry Pi
- The subsystem should be able to process one frame at most in 100 milliseconds

#### **1.1.2.2 PID Controller Subsystem Requirements**

- The subsystem should be able to control the motors
- The subsystem should be able to react the external disturbances

#### **1.1.3 Communication System Requirements**

- The subsystem should ensure safe internal communication
- The subsystem should ensure safe external communication

##### **1.1.3.1 Internal Communication Subsystem Requirements**

- The microcontrollers should be able to communicate with each other via serial communication
- The internal communication speed should be compatible with the processing speed of the lane detection subsystem

##### **1.1.3.2 External Communication Subsystem Requirements**

- The subsystem should be able to communicate with the opponent via Wi-fi protocol
- The subsystem should be able to execute handshake protocol

#### **1.1.4 Driving System Requirements**

- The subsystem should control motion subsystem according to output of the computation system

##### **1.1.4.1 Speed Subsystem Requirements**

- The subsystem should decrease the vehicle speed at the narrow lane
- The subsystem should increase the vehicle speed at the wide lane
- The subsystem should decrease the vehicle speed at the extreme disturbance

##### **1.1.4.2 Direction Subsystem Requirements**

- The subsystem should drive the motors according to computation system outputs
- The system should ensure that the vehicle follows the lane

### **1.1.5 Motion System Requirements**

- The system should ensure that the vehicle can drive itself with enough power

#### **1.1.5.1 Wheels Subsystem Requirements**

- The subsystem should ensure that the wheels can grip lane without slipping in all conditions

#### **1.1.5.2 Motors Subsystem Requirements**

- The subsystem should ensure that the motors can supply enough torque to accelerate the vehicle
- The subsystem should ensure that the motors can execute driving system outputs without deviation

### **1.1.6 Structure System Requirements**

- The system should ensure that structure is robust for external effects
- The system should ensure that structure is balanced to increase handling

#### **1.1.6.1 Chasis Subsystem Requirements**

- The subsystem should ensure that the chassis is rigid
- The subsystem should ensure that the chassis have enough space for components
- The subsystem should ensure that the chassis can provide low center of mass

#### **1.1.6.2 PCB Subsystem Requirements**

- The subsystem should ensure that all the electronic devices are placed on PCB
- The subsystem should ensure that the components are not connected via loose cable

## **2 VER2**

### **2.1 System Level Requirements**

#### **2.1.1 Sensing System Requirements**

- The system should detect the sides of the road.
- The system should not be effected from external disturbances.
- The system should detect the opponent vehicle.

#### **2.1.2 Computation System Requirements**

- The system should be able to produce middle line to follow
- The system should be able to control the robot

#### **2.1.3 Communication System Requirements**

- The subsystem should ensure safe internal communication
- The subsystem should ensure safe external communication

#### **2.1.4 Driving System Requirements**

- The subsystem should control motion subsystem according to output of the computation system

#### **2.1.5 Motion System Requirements**

- The system should ensure that the vehicle can drive itself with enough power

#### **2.1.6 Structure System Requirements**

- The system should ensure that structure is robust for external effects
- The system should ensure that structure is balanced to increase handling

## **2.2 Subsystem Level Requirements**

### **2.2.1 Lane Detection Subsystem Requirements**

- The subsystem should be able to detect only the shades of green color
- The subsystem should be able to detect edges in the camera frame in any light condition
- The subsystem should be able to tell differences between disturbances and lane
- The subsystem should be able to interpret the middle of the lane if both sides are present at the frame

### **2.2.2 Vehicle Detection Subsystem Requirements**

- The subsystem should detect the opponent to be caught with in a 5 cm
- The subsystem should detect the chasing opponent if it reaches from back with in a 5 cm

### **2.2.3 Data Processing Subsystem Requirements**

- The subsystem should be able to analyse data produced by sensing system
- The subsystem should be able to produce the angle information required by the controller subsystem
- The subsystem should be able to work on Raspberry Pi
- The subsystem should be able to process one frame at most in 100 milliseconds

### **2.2.4 PID Controller Subsystem Requirements**

- The subsystem should be able to control the motors
- The subsystem should be able to react the external disturbances

### **2.2.5 Internal Communication Subsystem Requirements**

- The microcontrollers should be able to communicate with each other via serial communication
- The internal communication speed should be compatible with the processing speed of the lane detection subsystem

### **2.2.6 External Communication Subsystem Requirements**

- The subsystem should be able to communicate with the opponent via Wi-fi protocol
- The subsystem should be able to execute handshake protocol

### **2.2.7 Speed Subsystem Requirements**

- The subsystem should decrease the vehicle speed at the narrow lane
- The subsystem should increase the vehicle speed at the wide lane
- The subsystem should decrease the vehicle speed at the extreme disturbance

### **2.2.8 Direction Subsystem Requirements**

- The subsystem should drive the motors according to computation system outputs
- The system should ensure that the vehicle follows the lane

### **2.2.9 Wheels Subsystem Requirements**

- The subsystem should ensure that the wheels can grip lane without slipping in all conditions

### **2.2.10 Motors Subsystem Requirements**

- The subsystem should ensure that the motors can supply enough torque to accelerate the vehicle
- The subsystem should ensure that the motors can execute driving system outputs without deviation

### **2.2.11 Chasis Subsystem Requirements**

- The subsystem should ensure that the chassis is rigid
- The subsystem should ensure that the chassis have enough space for components
- The subsystem should ensure that the chassis can provide low center of mass

### **2.2.12 PCB Subsystem Requirements**

- The subsystem should ensure that all the electronic devices are placed on PCB
- The subsystem should ensure that the components are not connected via loose cable

## 3 TESTVER1

### 3.1 Systems & Subsystems Tests

#### 3.1.1 Sensing System Tests

##### 3.1.1.1 Lane Detection Subsystem Tests

##### 3.1.1.2 Light Condition Test

##### 3.1.1.3 Visual Disturbance Test

##### 3.1.1.4

##### 3.1.1.5 Vehicle Detection Subsystem Tests

##### 3.1.1.6 ●

#### 3.1.2 Computation System Tests

##### 3.1.2.1 Data Processing Subsystem Tests

##### 3.1.2.2 PID Controller Subsystem Tests

#### 3.1.3 Driving System Tests

##### 3.1.3.1 Speed Subsystem Tests

##### 3.1.3.2 Direction Subsystem Tests

#### 3.1.4 Motion System Tests

##### 3.1.4.1 Wheels Subsystem Tests

##### 3.1.4.2 Motors Subsystem Tests

#### 3.1.5 Structure System Tests

##### 3.1.5.1 Chasis Subsystem Tests

##### 3.1.5.2 PCB Subsystem Tests

## 4 TESTVER2

### 4.1 Systems Level Tests

#### 4.1.1 Sensing System Tests

#### 4.1.2 Computation System Tests

#### 4.1.3 Driving System Tests

#### 4.1.4 Motion System Tests

#### 4.1.5 Structure System Tests

## 4.2 Subsystems Level Tests

### 4.2.1 Lane Detection Subsystem Tests

#### 4.2.1.1 Light Condition Test

#### 4.2.1.2 Visual Disturbance Test

#### 4.2.1.3

### 4.2.2 Vehicle Detection Subsystem Tests

#### 4.2.2.1 ●

### 4.2.3 Data Processing Subsystem Tests

### 4.2.4 PID Controller Subsystem Tests

### 4.2.5 Speed Subsystem Tests

### 4.2.6 Direction Subsystem Tests

### 4.2.7 Wheels Subsystem Tests

### 4.2.8 Motors Subsystem Tests

### 4.2.9 Chasis Subsystem Tests

### 4.2.10 PCB Subsystem Tests
